

UX Research – FinTrack (Smart Personal Finance & Expense Tracking App)

Project Overview

FinTrack is a mobile application designed to help users manage their daily expenses, monitor budgets, and gain insights into their spending habits. The goal is to provide a simple, intuitive, and efficient way to track personal finances.

Research Objectives

- Understand how users currently track their expenses.
- Identify common challenges in personal finance management.
- Discover features users expect from an expense tracking app.
- Design an interface that is easy to use for beginners and regular users.

Target Audience

- College students
- Young professionals
- Freelancers
- Individuals managing monthly household budgets

Research Findings

Based on interviews with potential users and analysis of existing expense tracking apps, the following observations were made:

User Goals

- Record expenses quickly.
- View monthly spending summaries.
- Stay within a planned budget.
- Identify where money is being spent.
- Access financial information anytime.

Pain Points

- Forgetting to record daily expenses.
- Difficulty categorizing transactions.
- Complicated interfaces in existing finance apps.

- Lack of clear spending visualizations.
- Trouble tracking monthly budgets consistently.

User Needs

- Fast and simple expense entry.
- Dashboard showing total income, expenses, and balance.
- Category-wise expense tracking.
- Budget alerts and reminders.
- Easy-to-read charts and reports.

Design Decisions

- Use a clean and minimal interface.
- Keep navigation simple with clearly labeled sections.
- Provide quick access to “Add Expense.”
- Display financial summaries on the home screen.
- Use visual charts to improve understanding of spending patterns.

Conclusion

The research indicates that users value simplicity, speed, and clear financial insights. FinTrack focuses on reducing manual effort while helping users make informed financial decisions through an intuitive and user-friendly experience.
